

## This is John ...

This is John. He teaches agriculture at the Green Academy College Farm in Aarhus, Denmark. On the picture, he is feeding a glass of algae with carbon dioxide during the third EBBEY project meeting in Seinäjoki, Finland, October 2014. - Weird? A little bit, perhaps. Nevertheless, it makes sense in the EBBEY project, which deals with teaching sustainability in the green vocational educations.

## It's competition time!

By Hans Blankestijn, EBBEY project manager

The 9 partners in the EBBEY project have decided to launch a student competition for green vocational students all over Europe. The news about the competition is distributed by the EBBEY partners and posted on EUROPEA's website and its Facebook-profile.

Under the headline, "BBE – what's in it for you?", students can present their ideas and considerations of the Biobased Economy (BBE). An international jury will select the most original contribution and invite the winning student and a teacher to attend the final project meeting scheduled

for Friday 6 November 2015 in Luxembourg. Deadline for handing in contributions for the competition is **1 June 2015**. Details about the competition is available at the EBBEY project website: [www.ebby-project.eu](http://www.ebby-project.eu).
